

# Business Model & Financing E- Bus Mobility

*Workshop on*  
**Electrification of Public Transport**  
**Ahmedabad**

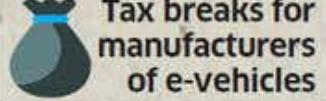

**Gautam Patel**  
Principal Consultant, Coordinates, Ahmedabad  
Visiting Faculty and Associate, CoE, CEPT University

# Electric Vehicles in India emerging, backed by Policy Framework

1. Indian automobile market still largely dominated by fossil fuelled vehicles.
2. Announcement of National Electric Mobility Mission Plan in 2012 aiming at 6 million electric/hybrid vehicles vehicles by 2020.
3. Absence of charging infrastructure, high battery costs - main challenges
4. However, Policy Framework firming up
  - Faster Adoption and Manufacturing of Electric Vehicles (FAME) India, Phase I and II - for market development and manufacturing eco-system.
  - Fiscal Incentives for EVs (GST, Concessions, Registration charge waiver etc)
  - State Level Electric Vehicle (EV) policies
  - ERC – Concessional Tariffs

## Plug And Play

India plans to shift to all-electric vehicle fleet by 2030

 Tax breaks for manufacturers of e-vehicles

Vehicles to be sold without battery; Discharged battery can be swapped for a recharged one

Specific plans for e-rickshaws, electric two-wheelers, buses, commercial vehicles and cars in final stages

 Charging stations proposed for private cars and taxis

Aggregators to play key role in transition of public transport to e-vehicles

# EV Charging Infrastructure Model

- **Guidelines and Standards** by Ministry of Power vide Notf. dated 14-12-18
- Private EV Charging at residences / offices permitted
- Public Charging Stations (PCS) – De-licensed Activity, can apply to Discom, Open Access permitted
- Charging Standards for PCS – CCS and ChadeMO (All charging specified models to be available)
- Tariff by appropriate Commission. Should not be more than average cost of supply plus 15%.
- State Nodal agency to fix ceiling of Service Charges for charging. Domestic Tarrif applicable for domestic charging
- Network Service Providers to allow slot booking for charging
- Charging Equipment to be Type tested by “reputed authority”
- OMO can set up PCS using “firewall,” Swap stations also permitted.
- At Least one Charging Station in 3 Km x 3 Km grid, one CS every 25 Km on highways. Land Use.

# Regulation - Policy - Responsibility Matrix for EVs / Charging Infra

| Activity                              | Key Provider   | Regulator / Promoter Agencies  |
|---------------------------------------|--|--|
| Power Generation esp renewable        | Power GenCos   | State and Central Power Min.<br>ERCs, CEA<br>State Nodal Agencies (GEDA)                 |
| Transmission /Trade                   | Transmission Companies   | ERC (Wheeling & Licensing)   |
| Distribution of Power for EV Charging | Discoms  | ERC (Licensing, Tarrif and Regulation),<br>GEDA  |
| Grid Stability                        | Transcos /Discoms  | CEA, Power Grid Corp. , Transcos   |
| Creation of Public Charging Stations  | Aggregators (Pvt, PSUs, ULBs)  | Central Ministry, CEA (standards)<br>Discoms (Clearance)<br>CEA (Nodal Agency, Database) |
| Power Sale to EVs.                    | Aggregators (Pvt, PSUs, ULBs)<br>Network Service Providers (For booking slots) | Tarrif (ERC)<br>Nodal Agency (for Service Charge)  |
| Standards for Evs                     | -  | ARAI, CIRT   |
| EV Promotion                          | -  | All  |

# Prices of LI-Ion Batteries continue to drop, with landed fitted costs in India around USD 250/ Kwh presently.

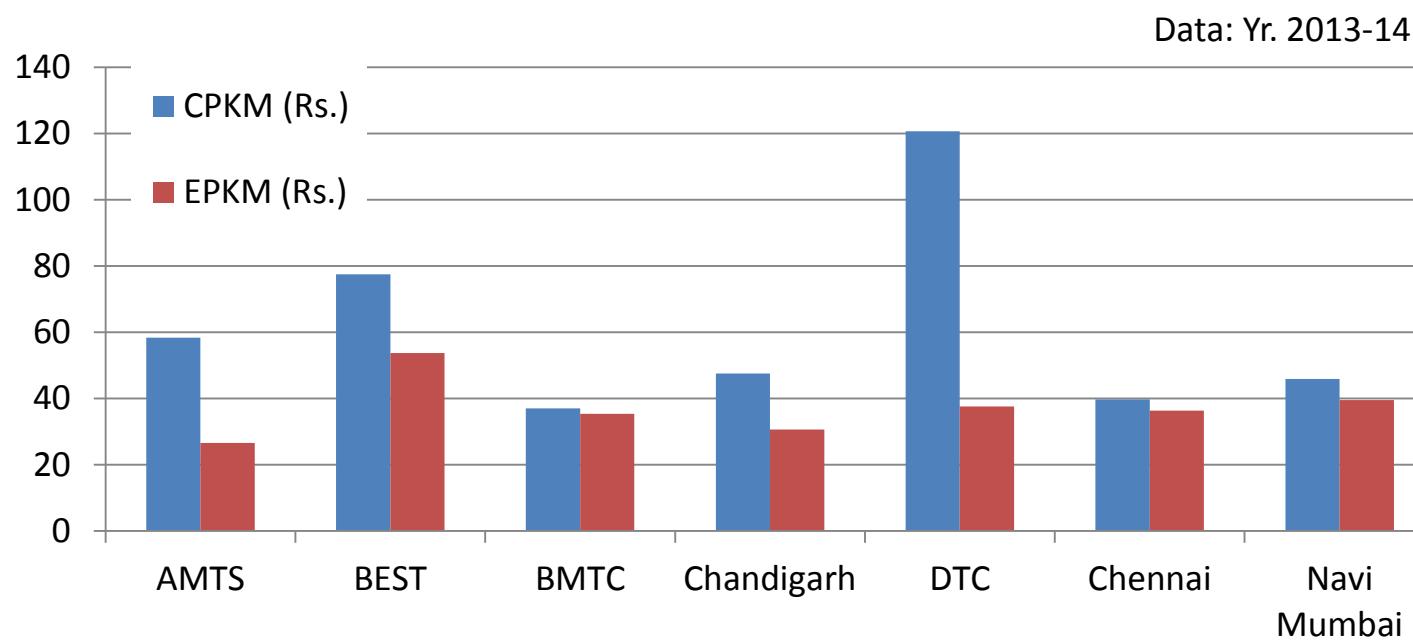

Battery pack price (real 2018 \$/kWh)

| Vehicle | Fuel Econ. (Km/Kwh) | Range (km) | Battery (KWh) | Battery Cost (Rs. lakh) |
|---------|---------------------|------------|---------------|-------------------------|
| 2W      | 20-24               | 80         | 4             | 0.72                    |
| 3W      | 16-18               | 70         | 4             | 0.72                    |
| Car     | 4-5                 | 150        | 36            | 6.50                    |
| Bus     | 0.6 - 1             | 200        | 250           | 45.00                   |

# Most of our Bus based PT Systems run regular operating losses

- Outsourcing on GCC basis has reduced deficits, but not eliminated them.
- The situation is similar to State Electricity Boards in the late nineties and early 2000s when they were loaded with losses.
- Losses are inevitable in PT. We have to find a way to deal with it.

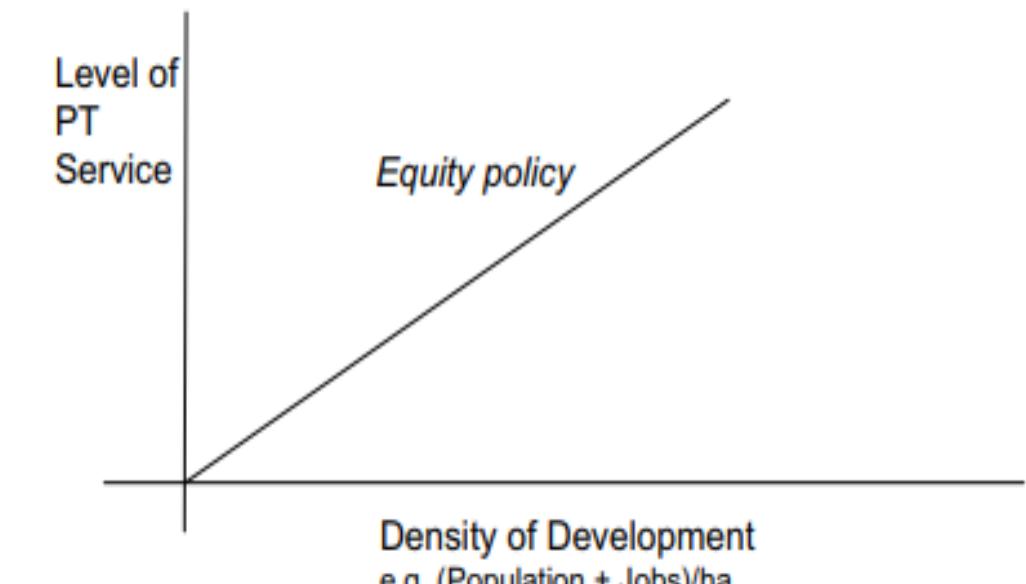

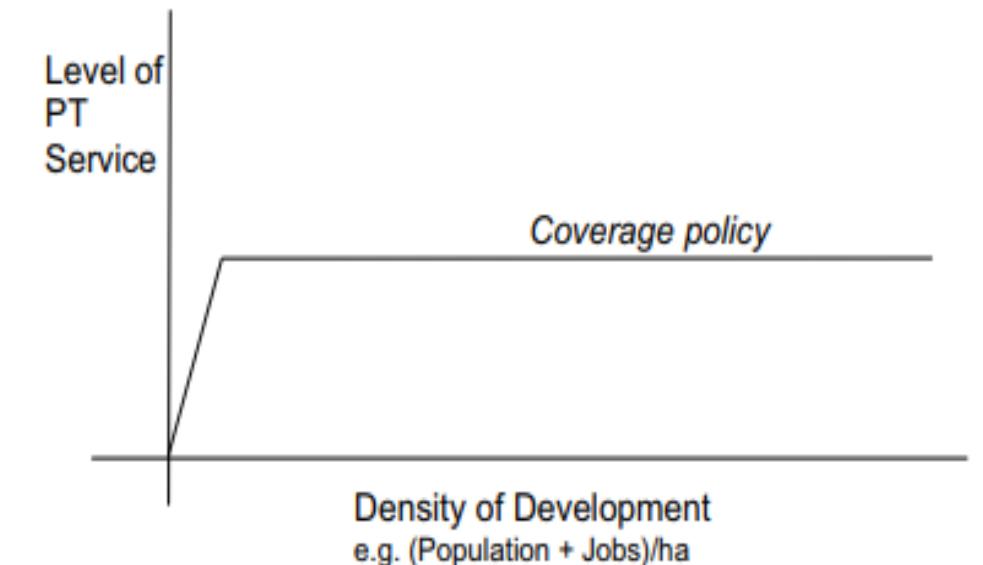

| Revenues and Costs of Select SRTUs plying in Metropolitan Cities (2014-15) (Rs Crore) |   |                       |                    |                    |
|---|---|-----------------------|--------------------|--------------------|

# Losses are inevitable in Public Transport

- Systems can focus on either higher patronage or higher coverage as a Policy stance.
- Patronage focused systems respond mainly to busy routes with higher capacity. Coverage of sparsely populated areas at the peripheries suffer.
- Coverage focused systems tend to offer services to even low density areas without regard to ridership.
- Higher coverage leads to lower occupancies and lead to lower revenues vis-à-vis expenses.
- Balanced approach to both coverage and patronage required, accepting inevitability of some losses.

## The Patronage v/s Coverage trade off

Source: Walker, Jarrett, *Purpose-driven public transport: creating a clear conversation about public transport goals*, *Journal of Transport Geography* 16 (2008)

# Financing Electric Buses

1. FAME I : Capex based Subsidy
2. Chief Ministers Bus Scheme in Gujarat : Operations based subsidy
3. FAME II : Need to fund 7000 buses (Around 10,000 crore to a broken PT System)
  - Capex based subsidy, GCC mandatory
  - Model Concession Agreement by Niti Ayog
    - Road BOT Template
    - No heed paid to previous generations of MCAs
    - Nothing specific to Electric Buses
    - Termination payments similar to Power / Road sector

# Financing Electric Buses

1. Key difference between E Buses and ICE Buses is higher capex need for E Buses
2. STUs need to be financially strengthened to create capacity to purchase buses through borrowing on their own strengths, rather than depending on ad hoc subsidies
3. The need is financing of Public Transport, not Electric Vehicles.

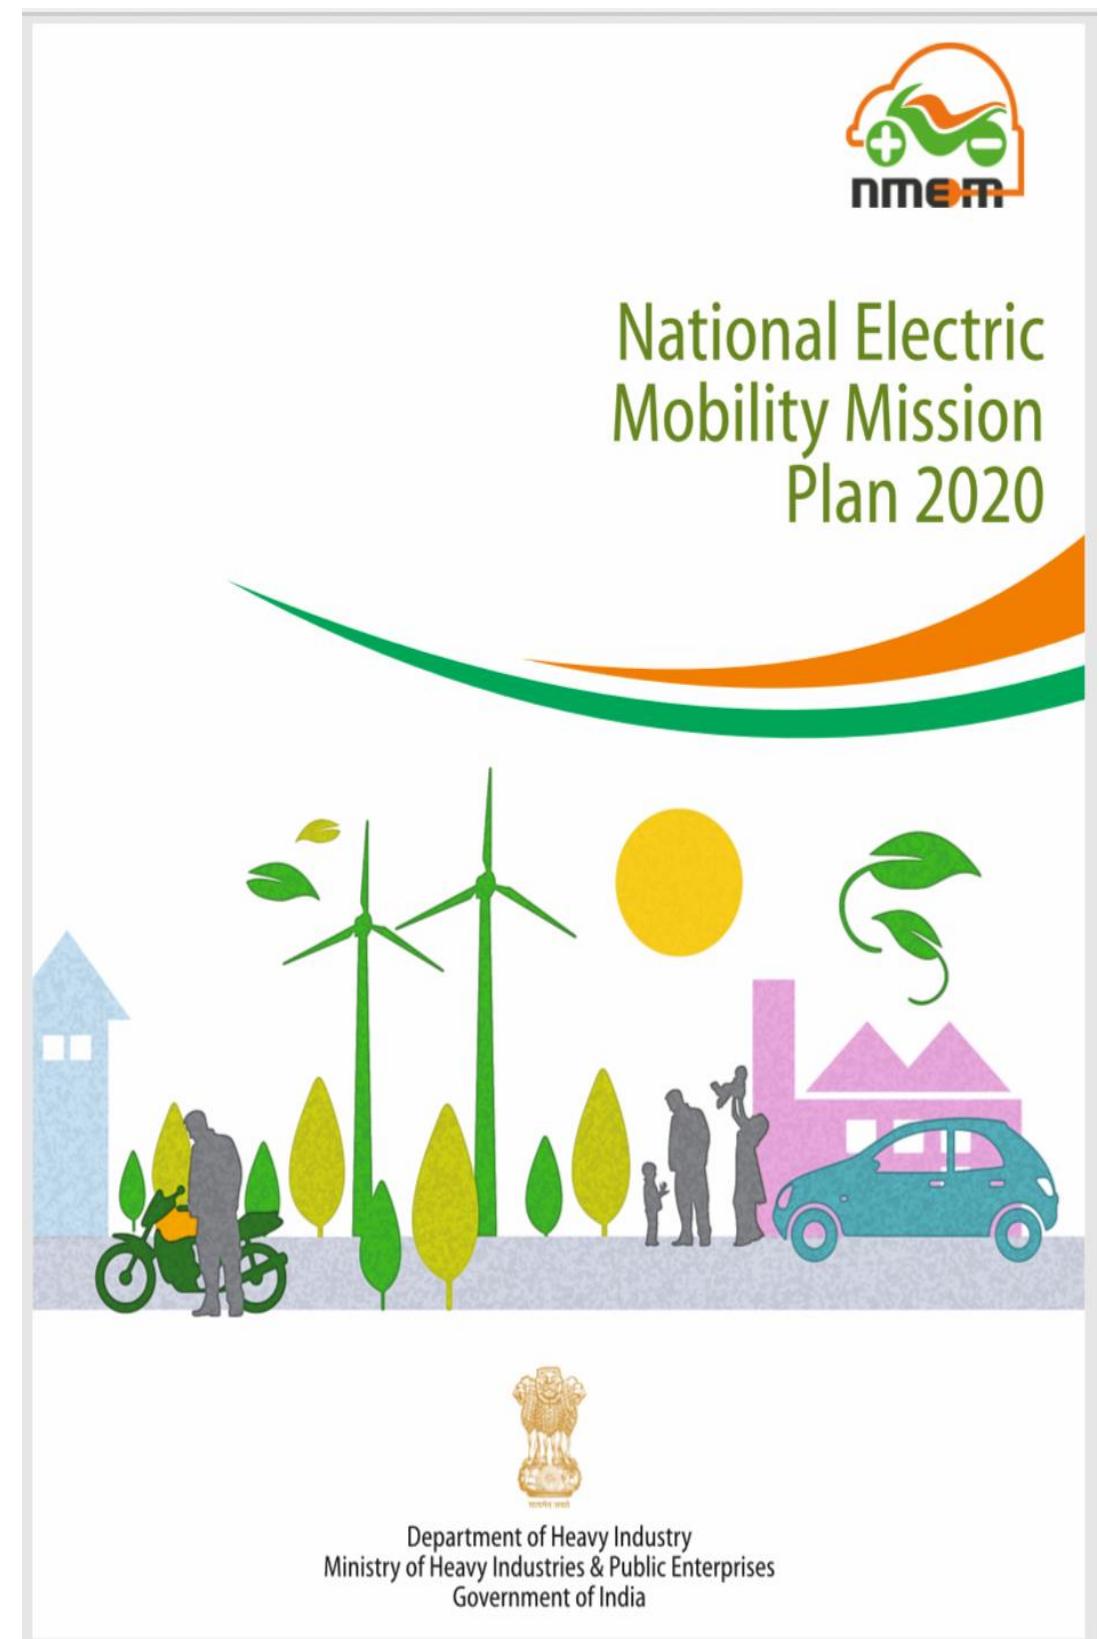

# THANK YOU

## **The National Urban Transport Policy (NUTP), 2006**

- One of the objectives stated in the NUTP is promoting the use of cleaner technologies.
- It further states that cleaner technologies need to be encouraged so that the problem of vehicular pollution can be more effectively dealt with. And hence, the Central Government would encourage the research, development and commercialization of cleaner technologies.
- It also talks about offering suitable concessions and benefits that would enable new auto fuel technologies to make an entry and compete with established technologies on more equitable terms.
- This will also encourage established technologies to improve their performance characteristics and compete with the emerging choices.
- It also further states about introducing measures to incentivize the use of fuel efficient (zero pollution) and small sized vehicles that use up little road space and also cause low pollution.

### National Electric Mobility Mission Plan 2020

- In 2012, the central government launched the **National Electric Mobility Mission Plan** to promote the use and manufacture of reliable, efficient and affordable EVs and xEVs. It is the **guiding document** that will form the basis for all the future initiatives, schemes, policies, and other interventions of the government for electric mobility.
- It aims to achieve national fuel security by promoting hybrid and electric vehicles in the country.
- One of its key takeaways is to achieve xEV sales of 6-7 million units by 2020 which in turn shall result in 2.2-2.5 million tonnes of liquid fuel savings and a decrease of 1.3 – 1.5% in carbon dioxide emissions.
- Under this mission, the **FAME (Faster Adoption and Manufacturing of (Hybrid &) Electric vehicles) India scheme** is one such initiative undertaken by the government of India to promote EVs and xEVs.
- Under this scheme, **funding provisions** for four key areas namely technology development, demand creation, pilot projects, and charging infrastructure has been provided.

| EV scenario in India   |  | Component of the scheme   | 2015-2016            | 2016-2017                     |                   |                    |                               |              |               |   |                 |       |                |               |   |                 |                 |                |                 |                 |                   |                   |                           |                 |                 |                   |                     |       |                       |                       |   |   |  |  |

## Department of Heavy Industry (DHI)

This department is responsible for planning, implementation and review of the scheme. It is also responsible for allocation of funds for the various components of the scheme, based on approval, allocation of funds by the Finance Ministry and implementation of pilot projects under the scheme. Addresses all the issues relating to the guidelines and for removal of difficulties in the implementation of the scheme.

## National Board of Electric Mobility (NBEM)

## Development Council for Auto and Allied Industries (DCAAI)

## National Automotive Board

## Project Implementation and Sanctioning Committee

Oversees the progress under the scheme

Operating agency for the implementation for the scheme including the disbursement of funds for various components under the overall supervision and direction of Department of Heavy Industry (DHI).

Approves specific projects under Pilot projects, R&D/Technology Development and Public Charging Infrastructure components
